

## Garlando Weatherproof Football Tables

This is an information sheet that provides you with care and maintenance advice for your weatherproof table.

The assembly instructions supplied with your table will give details of the manufacturer's 3 year warranty. This only covers any parts that Garlando consider are defective due to a manufacturing defect.

It is important to know that these tables require regular cleaning and lubrication in use. It is mandatory for the cover supplied with your table to be used whenever your table is not in use.

The following has been taken from the current Garlando assembly instructions: -

*Weatherproof tables: to maintain your outdoor football table and keep it performing well, we recommend you follow the instructions below. Always cover your table when you are not using it to protect it from rain and from the UV rays which are harmful to the table and will reduce its life. Although this is a weatherproof table and constructed using materials designed for the outdoors, the cover gives the table significant additional protection, and its use is required in order for the warranty to be valid. A cover specifically designed by Garlando and made from showerproof material is supplied as standard on some models and can be purchased as an additional item on others depending on which model of football table you have chosen. As an alternative, you can use a tarpaulin or any showerproof cover, ensuring it is well secured so that the wind cannot lift it and allow the rain getting through. Maintenance for bars and bearings. To keep the roller bearings in good condition so that the bars glide well, we suggest frequently spraying the bars using a good quality silicone spray such as the WD40. You can also use our spray Slidy which has a protective and lubricating double action. Be careful not to use any oil or other type of grease which may attract dirt and clog the roller bearings Standard cleaning. Clean your table periodically by wiping its surfaces with a damp cloth to remove dust and dirt. Deeper cleaning. For a deeper cleaning, you can use any household detergent which does not contain wax or abrasives, ensure any residue is completely removed. Do not use any solvent or detergents containing ammonia, acetone, petrol etc that could damage the colours, particularly those of the cabinet. Do not use too much water on the table. Extra tips for sea areas If your table is kept in a coastal area, to protect the bars from the corrosive salt we suggest cleaning the bars using a damp cloth and then frequently spraying them with Slidy. Do not spray the bars before cleaning them. In case of snow. The table should not stand in snow for a long time. If you can, store it under a canopy or a veranda or bring it inside to enjoy during the winter season.*
